

# Thanks for Buying a Spring Starter Pack

*We're sure you and your lawn won't regret it.  
Detailed instructions are on the back.  
But here's what each product does.*

**Turf Control** Kills common Australian weeds like bindii (bindies) and clover which invade your lawn and start to take over during the colder winter weather. So blast them early in spring with Turf Control. Otherwise they'll start to seed creating more weeds next year.

**LawnPlay Renovate** Your grass grows slower in winter and can't keep up with all the wear and tear from those backyard footy games. So spring's the perfect time to apply this amazing fertiliser which kick-starts new growth and gets your lawn ready to take on summer.

**Lawn Play Aquaturf** During winter, we all take a break from watering our lawns and gardens. So it's common for your soil to naturally start repelling water rather than absorbing it (the experts call this 'becoming hydrophobic'). Thankfully Aquaturf will resolve this issue quick smart.

All you need for the perfect backyard

# Your Simple 2-Week Plan for a Great Lawn

## Week 1 - Kill off those winter broadleaf weeds and bindies

They're nasty and they'll take over your lawn unless you get them first. So reach for your **Turf Control**.

- 1 But wait ... to make the most of **Turf Control**, always choose a dry day so it doesn't wash away PLUS *don't mow your lawn* before you apply it and for the week after.
- 2 Simply add 50ml of **Turf Control** to 5L of water into your sprayer\*. This mixture will then cover 100m<sup>2</sup>.
- 3 After applying, don't water your lawn for 24 hours. Just let the magic happen.
- 4 **Turf Control** will get to work straight away but it might take a few weeks until all the weeds are terminated. They'll usually start to turn yellow, curl up and start dying after a week.

## Week 2 - Greener, lusher, healthier grass

Now you can mow the lawn. Because it's time for **LawnPlay Renovate and Aquaturf**.

- 1 First spread the **LawnPlay Renovate** granuals evenly across your lawn. Either by hand or for a simpler, more even coverage use a spreader.\* Half the bag covers about 150m<sup>2</sup> of lawn.
- 2 Now it's straight on to **LawnPlay Aquaturf**. Add 200ml per 5L of water and apply directly on top of the fertiliser you've just spread. Thoroughly water your lawn. Give it a real good drink. Then grab one for yourself.

\*If you don't have a sprayer or a spreader you can order one from us and get 10% off. Just use this Discount Code: **SPRINGTIME** at the checkout.
