

# Lawnganics VITALISE

**VM3 + Organics Acids + Traces**  
Stress recovery and growth stimulation

## UNIQUE FEATURES

- Increases nutrient availability in soil and foliage
- Improves heat and drought tolerance
- Strengthens turfgrass defense systems
- Enhances root growth and delayed senescence
- Reduces shock from transplant stress
- Contains beneficial biology for nutrient mineralisation
- Owned, developed and manufactured in Australia

## TECHNOLOGY

Lawnganics VITALISE is formulated with VM3 organic acids and delivers a unique solution to stimulate turf and soil. The combination of beneficial microbes, fulvic acid, humic acid, amino acids, kelp and sugars work together to boost soil biology, increase soil carbon, stimulate plant growth and break down organic matter.

## USE PATTERNS

When applied in sufficient volume of water and allowed to remain in contact with foliage, Lawnganics VITALISE delivers biologically active plant extracts into the cells of leaf and stem tissue.

Substances including seaweed extracts, L-form Amino acids (low molecular weight) and short chain humic acids act to increase cellular antioxidant levels, strengthen turfgrass defense systems, enhance chlorophyll production and subsequent photosynthetic efficiency.

When applied as a drench or when lightly watered into the turf root zone,

Lawnganics VITALISE will act to increase the availability of bound up soil nutrients.

Uptake via roots will impart some of the benefits which are more obvious from direct foliar application, however other soil benefits include stimulated microbial activity, increased respiration of turfgrass roots and improved general soil health.

## GUARANTEED ANALYSIS W/V%

<b>Total Nitrogen (N)</b>	2.7%
<b>Total Phosphorus (P)</b>	1%
<b>Total Potassium (K)</b>	1.7%

## APPLICATION RATES

200ml per 100m<sup>2</sup> Lawnganics VITALISE for foliar application.

400ml per 100m<sup>2</sup> VITALISE for soil drench application.
